Chiropractic acknowledges that the body has an innate ability to heal. Chiropractors strive to assist the natural healing response by correcting subluxations. Abnormal joint motion and alignment (subluxations) cause nerve interference by irritating or placing pressure on the spinal cord and nerves and altering neuro-biologic integration. The nervous system is vitally important to our wellbeing as it controls and co-ordinates all functions of the body. If the flow of nerve information around the body is disrupted, the healing response is compromised, and many health problems can arise.
